

link 2.0 //

*Freedom begins with a **LINK** between you and your vehicle*

Built with You in Mind

LINK 2.0 is a luxuriously reengineered turning and lowering seat base that offers you superior vehicle access. Powered by advanced, intelligent design, it delivers smoother, simplified transfers at the right height, tailored to your specific needs.

Safety First

Protection you can count on, every day

At Adapt Solutions, safety isn't just a feature, it's a promise. One that begins with a simple, uncompromising choice: we always use your vehicle's original seat. By preserving the seat your vehicle was designed, tested, and certified with, we protect the integrity of its factory safety systems from the very start. That promise is reflected in thoughtful design, rigorous testing, and systems built to work seamlessly with your vehicle. Every step preserves your vehicle's original safety architecture. The result is a solution designed to support everyday mobility with consistency, care, and peace of mind.

- **Preserves factory safety systems**

Because we always retain the original seat, all airbags, weight sensors, and seatbelt anchorages remain fully intact.

- **Extreme-temperature tested**

Proven performance in both hot and cold weather conditions.

- **Smart battery protection**

An integrated accelerometer senses when the system isn't in use, safeguarding your vehicle's battery.

- **Built-in emergency backup**

Ensures the seat can always be returned safely inside the vehicle.

- **Certified for safety & durability**

Rigorously tested for crash performance, long-term use, and weight capacity.

- **350-lb weight capacity**

Supported by a heavy-duty steel frame for added confidence.

Designed to protect what matters

Power & Control

Independence within reach

Experience comfort and movement on your terms. LINK 2.0 gives you smooth, powered forward and backward travel, along with a unique tilt feature that helps you find the angle that feels just right. With built-in memory, the seat remembers your preferred position and returns to it automatically at the touch of a button.

You can also take advantage of our industry-exclusive LIFT UP feature, designed to assist with exiting the vehicle and customized to your individual needs.

Go where you want, when you want, comfortably and confidently

Control at your fingertips

Use the hand pendant for simple, intuitive control, or fine-tune every position with ease using the MyLINK mobile app. Your smartphone becomes a seamless extension of LINK 2.0, letting you customize settings, access support, and manage everything in one sleek, easy-to-use place.

Need assistance to stand?

The **LIFT-UP** feature smoothly elevates the seat to support a natural, confident transition out of the vehicle, delivering comfort and control at every step.

Comfort & Style

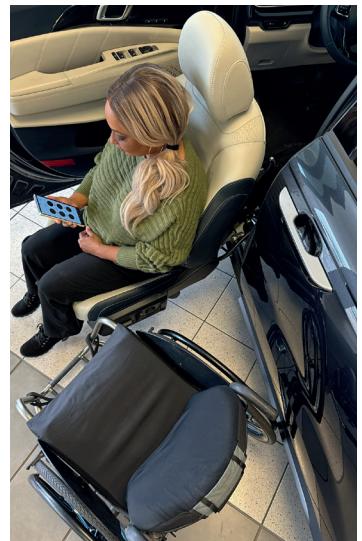

Your ride, your way

Whether you are a driver or a passenger, you keep the genuine comfort and style of your vehicle. LINK does not change the vehicle's structure. The original seat remains in place, retaining its factory recline, shape, height, and color. In most applications, heated and cooling seat options remain functional.*

Designed to blend in, LINK fits neatly within the seat design, preserving headroom and legroom and leaving cabin space uncompromised.

*Please refer to the Application List available on our website for more information.

Smarter than ever

Intelligent technology meets effortless control

- **Integrated monitoring**

Continuously monitors movement and system conditions to help ensure smooth, safe operation and seamless interaction between you, the LINK, and your vehicle.

- **Smooth, intelligent motion**

An advanced algorithm manages acceleration, transitions, and stops for a more natural, comfortable ride.

- **Guidance light**

Personalized and app-controlled, providing clear visual feedback during use.

MyLINK app

Take control of your experience with the MyLINK mobile app*.

Designed to keep you connected and supported wherever you go, it puts everything you need at your fingertips. LINK 2.0 actively tracks system status in the background, helping maintain smooth operation and supporting safe, reliable performance. From remote assistance and online troubleshooting to personalized settings, the app makes it easy to manage your LINK experience. You can even control your LINK device directly from your smartphone, making adjustments and operating features with ease.

*The MyLINK app is available for download on the Google Play Store and Apple App Store.
